

Dear All,

We are proud to announce that the Panoramic Power™ solution has been updated with new features.

Viewing Consumption Details

A tooltip added to the stacked chart now provides the total consumption.

Filtering Consumption Details

In **View List** you can now select multiple entries using Shift-click and Ctrl-click for quicker access to accumulated data.

Period Filter and Period Selection

In addition to the ready-made periods, the new **Specific Dates** option allows you to select a specific period.

Rules

Alarm Message Description

In this version you can formulate your own message to be sent to recipients of alarms. You can still use the old option of sending the built-in system text.

Rules – Selected Circuits

In this new version, you now see the exact location of the selected circuits to which the rule will be applied. The information includes the sensor serial number as well.

Rules - Actions

The SMS and email recipients can now be selected by full groups and individual users.

Alerts

Filtering

Now you can filter alerts by their communications means – SMS or e-mail.

Changing the Status and Severity of an Alert, Adding a Comment, Exporting

Now you can perform all of these operations in a single dialog box as well.

The new version allows you to export the alerts to a CSV (Excel) file.

Exporting Alerts

You can now open the alerts in Excel where you can save them in a file.

Account Settings

Calendars

You can now create a calendar by duplicating an existing one. This allows you to quickly build a calendar that is very similar to an existing one.

Contacts

Contacts too can now be exported and imported. The exported data goes to a CSV file. You can import contacts from an external CSV file.

Distribution Lists

When building distribution lists you can now drag names to quickly build the lists.

Best Regards,
Panoramic Power Support
