

# Device level energy management solutions for retail

## Overview

### Reduce energy costs and improve operations across your retail chain with real-time device level energy solutions

Wireless, self powered sensor technology and an energy analytics platform that optimizes operations and reduces energy consumption across the retail chain:

- Easy to implement and highly scalable
- Provide analytics and benchmarks
- Real-time alerts and automated reports

### Key points

#### Cut energy costs:

Reduce energy waste by benchmarking your chain and identifying inefficiencies and detecting offhour consumption in real-time.

#### Reduce repair costs and prevent failures through preventative maintenance:

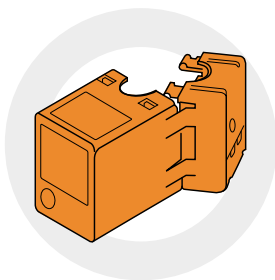

Identify unseen problems and predict failures through real-time alerts.

#### Operational optimization:

Determine when and which system is not functioning properly at each store to detect hidden operational inefficiencies and energy waste.
